SAVINGS ONE-PAGER

NO APP NEEDED

Save energy using the Mixergy Gauge

The gauge on the front of your tank shows how much hot water is ready and lets you ask for more. A few small habits help you heat only what you need.

Get to know your gauge

1. **Power button.** Press once to wake the gauge.
2. **Wi-Fi symbol.** Blue means online, white means offline. The gauge works either way.
3. **Blue lights** show water that isn't hot yet.
4. **Red lights** show hot water ready to use. **Green lights** show extra hot water you've asked for that's still heating.
5. **Up arrow.** Each press asks for one more light, about a tenth of the tank's usable hot water. This is a Boost.
6. **Down arrow.** Removes a green light if you asked for too much. It can't cool water that's already hot.

Three habits that save energy

1

Check before you boost

Count the red lights first. If there's enough hot water for what you need, there's no need to heat more.

2

Start small

Press the up arrow once and wait. Only add more if you still need it. You don't need all ten lights to be red.

3

Learn your number

Count the red lights before and after a shower or bath. Within a week you'll know how many lights your home uses.

A BOOST ISN'T INSTANT

A green light turns red once that water is hot. This usually takes about 15 minutes per light, and can take longer with a heat pump. Pressing the up arrow again won't make it faster. It just asks for more water.

Leave the tank switched on

Your tank needs power to heat water when you need it and to run its automatic safety features, like the cleansing cycle that heats the whole tank at least once every two weeks.

One light isn't one shower

How much hot water a light gives you depends on your tank's size and how your home uses water. That's why learning your own number helps.

Renting? Contact your landlord or housing provider first. They manage your tank and repairs.

Own your home? Contact the installer who fitted your tank.
